Prompt Log

Name: - Indrajit Singh

Team:- Zero Trace

Role:- Risk Analyst

Total Prompt:- 10

Summary Statistics

Tools	Count	Excellent	Good	Needed Work
ChatGPT	**5**	**3**	**1**	**1**
Perplexity	**1**	**2**	**0**	**1**
Gemini	**1**	**1**	**0**	**0**
Claude	**3**	**3**	**1**	**1**

Prompt 1

Date: 5 Feb

AI Tool: ChatGPT

Purpose: - To understand data security risk clearly so I could explain it simply in the report and presentation.

The prompt I Used: Suppose you are a risk analyst. Explain how data security risk work and how I can explain it to someone from non-technical background. Keep it simple but accurate.

Response Summary: The response explained data risk in simple terms using example like data exposure and system weaknesses. It also suggested ways to communicate the concept clearly.

Quality Assessment:

Rating: Excellent

Why: It gave practical explanation I could directly adapt.

How I Used This:

Report Section: Threat Overview

Specific Use: Used ideas to simplify explanation.

Verification:

How Verified: Cross- Checked with NIST Framework concepts.

Accuray: Yes

Prompt Log 2

Date: 7 Feb

AI Tool: Perplexity

Purpose: To identify real risk drivers like misconfiguration and human error.

The Prompt I Used: As a threat analyst, list key factor that increase data breach risk in modern organization. Include cloud risks and remote work exposure.

Response Summary: It is listed causes like weak access control, poor patching, and insider risk.

Quality Assessment:

Rating: Excellent

Why: Supported research with sources.

How I Used This:

Report Section: Risk factors discussion.

Specific Use: Helped explain underlying causes.

Verification:

How Verified: Compared with IBM breach report

Accuray: Yes

Prompt Log 3

Date: 7 Feb

AI Tool: ChatGPT

Purpose: To refine attack lifecycle explanation.

The Prompt I Used: You are a cybersecurity risk analyst. Explain attack lifecycle step by step and focus on where risk increases at each stage.

Response Summary: Explained stages and risk escalation clearly.

Quality Assessment:

Rating: Excellent

Why: Helped structure lifecycle narrative.

How I Used This:

Report Section: Attack Lifecycle

Specific Use: Used to shape explanation flow.

Verification:

How Verified: Compared with MITRE ATT&CK model

Accuracy: Yes

Prompt Log 4

Date: 8 Feb

AI Tool: Claude

Purpose: To map CIA triad impact realistically.

The Prompt I Used: Explain how a data breach affects confidentiality, integrity, and availability with real examples from a risk perspective.

Response Summary: Provided clear impact reasoning with examples.

Quality Assessment:

Rating: Excellent

Why: Very clear and analytical.

How I Used This:

Report Section: CIA Analysis

Specific Use: Supported impact explanations.

Verification:

How Verified: Checked against cybersecurity textbooks

Accuracy: Yes

Prompt Log 5

Date: 9 Feb
AI Tool: Gemini

Purpose: To generate mitigation strategies that are realistic.

The Prompt I Used: Suggest mitigation strategies a risk analyst would recommend for data security risk with priority and cost awareness.

Response Summary: Provided practical controls like MFA and monitoring.

Quality Assessment:

Rating: Good

Why: Needed minor refinement.

How I Used This:

Report Section: Mitigation

Specific Use: Used as starting point.

Verification:

How Verified: Compared with best practices guides

Accuracy: Yes

Prompt Log 6

Date: 10 Feb

AI Tool: ChatGPT

Purpose: To understand detection indicators.

The Prompt I Used: List indicators of compromise relevant to data breaches including behavioural signs.

Response Summary: Provided technical and behavioural indicators.

Quality Assessment:

Rating: Excellent

Why: Clear and usable.

How I Used This:

Report Section: Detection

Specific Use: Used for IOC discussion**.**

Verification:

How Verified: Cross-checked with security articles

Accuracy: Yes

Prompt Log 7

Date: 10 Feb

AI Tool: Claude

Purpose: To connect case study with risk analysis.

The Prompt I Used: Explain the MOVE it breaches and highlight lessons from a risk management perspective.

Response Summary: Explained incident and lessons learned.

Quality Assessment:

Rating: Excellent

Why: Provided real context.

How I Used This:

Report Section: Case Study

Specific Use: Used insights for discussion.

Verification:

How Verified: Checked news reports

Accuracy: Yes

Prompt Log 8

Date: 13 Feb

AI Tool: ChatGPT

Purpose: To explain early detection importance**.**

The Prompt I Used: Explain why early detection reduces impact during a data breach and provide simple reasoning.

Response Summary: Explained how early response limits damage.

Quality Assessment:

Rating: Excellent

Why: Strong reasoning**.**

How I Used This:

Report Section: Detection explanation

Specific Use: Strengthened analysis.

Verification:

How Verified: Compared with incident response guides

Accuracy: Yes

Prompt Log 9

Date:16 Feb

AI Tool: Claude

Purpose: To review mitigation logic.

The Prompt I Used: Review my mitigation approach and suggest improvements from a risk perspective.

Response Summary: Suggested prioritization improvements.

Quality Assessment:

Rating: Excellent

Why: Analytical feedback.

How I Used This:

Report Section: Mitigation refinement

Specific Use: Improved clarity.

Verification:

How Verified: Cross-checked internally

Accuracy: Yes

Prompt Log 10

Date: 20 Feb

AI Tool: ChatGPT

Purpose: To reflect on lessons learned.

The Prompt I Used: What key lessons should a risk analyst learn from studying data security incidents?

Response Summary: Highlighted importance of monitoring and controls.

Quality Assessment:

Rating: Excellent

Why: Insightful summary**.**

How I Used This:

Report Section: Reflection

Specific Use: Used for lessons learned**.**

Verification:

How Verified: Reviewed logically

Accuracy: Yes

MY BEST PROMPTS

Most Effective: Prompt 1 — Helped frame understanding clearly.

Most Improved: Prompt 3 — Iterative refinement improved lifecycle explanation.

Lessons Learned

What Worked

While working on this project, I noticed that whenever I gave detailed prompts with proper context, like mentioning that I'm working as a risk analyst or explaining which section of the report I was focusing on, the responses became much more useful and aligned with what I actually needed. Refining prompts step by step also helped me get clearer explanations, especially for technical areas like attack lifecycle, CIA impact, and mitigation strategies. Overall, using AI in this way felt like a supportive tool that helped save time and keep the workflow structured.

What Didn't Work

At certain points, some responses were either too general or missed small details, which meant I had to rephrase the prompt or ask follow-up questions to get more accurate information. Because of this, a few interactions were marked under "Needed Work" in the summary statistics, since they required additional refinement before they could be used. This experience also reinforced that AI should not be trusted blindly, and we had to carefully review and verify the outputs to ensure everything included in the report was correct and relevant.
